# Help for Virginians with Pre-Existing Conditions

In March, the President signed an historic package of health reforms into law. The new law offers critical protections for the millions of Americans who have pre-existing conditions today—as well as for those who are healthy now but who may develop a health problem as they grow older. As a result of health reform, no American with a pre-existing condition will be denied coverage, charged a higher premium, or sold a policy that excludes coverage of essential health benefits simply because he or she has a pre-existing condition.

On May 6, Families USA released a new report, *Health Reform: Help for Americans with Pre-Existing Conditions*, which was designed to take a closer look at the number of Americans with diagnosed pre-existing conditions who, absent reform, would be at risk of being denied coverage in the individual insurance market. The uninsured and those who do not have access to job-based coverage are at greatest risk, but even those who now have coverage at work could be at risk if they lose or leave their jobs and have to find coverage in the individual market.

Our analysis does not include every condition that may lead to a denial of coverage, nor does it capture every person with a pre-existing condition that would likely result in higher premiums or excluded benefits. Further, this analysis cannot capture the uninsured and underinsured Americans who, lacking a way to pay for care, do not seek treatment and whose health conditions, therefore, remain undiagnosed. Because people with low incomes and racial and ethnic minorities are disproportionately represented among the uninsured and underinsured, they are likely to be undercounted in our analysis.

To better understand the effect that health reform will have on these people, Families USA commissioned The Lewin Group to quantify the number of Americans who are diagnosed with conditions that commonly lead to denials of coverage. That report contains national data, as well as a detailed discussion of the methodology, and it is available online at www.familiesusa.org. This new fact sheet presents statespecific data that mirror the national data in *Health Reform: Help for Americans with Pre-Existing Conditions*. 2

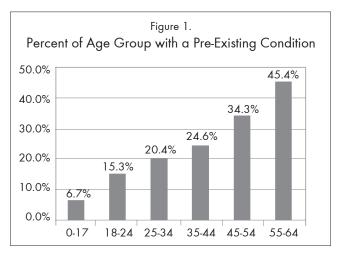

#### One in Five Virginians Is at Risk of Denial of Coverage

- Approximately 1,461,000 Virginians under the age of 65 have a pre-existing condition that, absent reform, could lead to a denial of coverage by an insurance company (see Table 1).
- This means that, without health reform, more than one in five non-elderly Virginians (22.2 percent) is at risk of being denied coverage.

Table 1. Virginians under Age 65 Diagnosed withA Pre-Existing Condition that Could Result in aDenial of CoveragePopulation under 65\*6,587,000Population under 651,461,000With a Pre-Existing ConditionPercent of Population under 6522.2%With a Pre-Existing Condition\* Data are for the non-institutionalized, non-Medicare-<br/>eligible population.

## Pre-Existing Conditions: A Problem that Grows with Age

- Individuals in every age group are affected by pre-existing conditions that, absent reform, could lead to a denial of coverage (see Figure 1, and Table 2 on page 3). However, those who are older are much more likely to have such a condition, as follows:
  - In Virginia, nearly one in six young adults aged 18 to 24 (15.3 percent) has a pre-existing condition that could lead to a denial of coverage.
  - More than one-third of Virginia adults aged 45 to 54 (34.3 percent) have a pre-existing condition that could lead to a denial of coverage.
  - Nearly half of Virginia adults aged 55 to 64 (45.4 percent) have a preexisting condition that could lead to a denial of coverage.

- Adults aged 45 to 64 account for only 29.2 percent of the non-elderly Virginia population, but they make up more than half (51.2 percent) of state residents with pre-existing conditions.
  - This phenomenon is most pronounced among adults aged 55 to 64. Adults in this age group account for only 12.0 percent of the non-elderly Virginia population, but they make up nearly one-quarter (24.5 percent) of those state residents with pre-existing conditions.

Age Group	Number in Age Group*	Number in Age Group with a Pre-Existing Condition	Percent of Age Group with a Pre-Existing Condition	As a Percent of Non-Elderly People with a Pre-Existing Condition
0-17	1,831,500	123,500	6.7%	8.5%
18-24	693,000	105,700	15.3%	7.2%
25-34	1,009,300	205,500	20.4%	14.1%
35-44	1,131,700	278,600	24.6%	19.1%
45-54	1,132,600	388,900	34.3%	26.6%
55-64	789,300	358,500	45.4%	24.5%
Total * *	6,587,000	1,461,000	22.2%	100.0%

## Children and Young Adults with Pre-Existing Conditions

- While the percentage of Virginia children and young adults who have a pre-existing condition that could lead to a denial of coverage is low relative to older Virginians, a substantial number of children and young adults are affected.
  - In Virginia, 123,500 children under the age of 18, and 105,700 young adults aged 18 to 24, have a pre-existing condition that could lead to a denial of coverage.

# Every Income Group Is Affected

- People of every income group have pre-existing conditions that, without health reform, could lead to a denial of coverage (see Table 3 on page 4). By income group, we see the following trend:
  - The lowest-income Virginians are the most likely to have such a condition, with nearly one in four (24.2 percent of) individuals in families with incomes below 100 percent of the federal poverty level (less than \$22,050 for a family of four in 2010) affected.
  - Approximately 22.4 percent of Virginians in families with incomes between 100 and 199 percent of poverty (\$22,050-\$44,100 for a family of four in 2010) have such a condition.
  - Approximately 21.9 percent of Virginians in families with incomes at or above 200 percent of poverty (\$44,100 or higher for a family of four in 2010) have such a condition.

Δ

Family Income Relative to the Federal Poverty Level	Number in Income Group*	Number in Income Group with a Pre-Existing Condition	Percent of Income Group with a Pre-Existing Condition	As a Percent of Non- Elderly People with a Pre-Existing Condition
<100%	586,200	142,100	24.2%	9.7%
100-199%	935,600	209,600	22.4%	14.3%
≥ 200%	5,065,600	1,109,000	21.9%	75.9%
200-399% ≥ 400%	1,896,400 3,169,300	418,700 690,300	22.1% 21.8%	28.7% 47.3%
Total**	6,587,000	1,461,000	22.2%	100.0%

Data are for the non-institutionalized, non-Medicare-eligible population.

\*\* Numbers do not add to total because of rounding.

 While the lowest-income Virginians are slightly more likely to be affected by pre-existing conditions, middle-class and higher-income Virginians (those in families earning more than 200 percent of poverty, or \$44,100 for a family of four in 2010) make up more than three-quarters (75.9 percent) of those with pre-existing conditions that could lead to a denial of coverage.

## Every Racial and Ethnic Group Is Affected

- People of every racial and ethnic group have pre-existing conditions that, absent reform, could lead to a denial of coverage (see Table 4 on page 5). By race and ethnic group, we see the following trend:
  - In Virginia, nearly one-quarter (24.1 percent) of whites (non-Hispanic) have a pre-existing condition that could lead to a denial of coverage.
  - More than one in five (22.4 percent of) African Americans (non-Hispanic) has such a condition.
  - More than one in five (22.1 percent of) of American Indians and Alaska Natives has such a condition.
  - More than one in seven Hispanics (15.1 percent) is affected.
  - Nearly one in 10 Asian Americans (9.9 percent) has a pre-existing condition that could lead to a denial of coverage.

Racial or Ethnic Group	Number in Group*	Number in Group With a Pre-Existing Condition	Percent of Group With a Pre-Existing Condition	As a Percent of Non- Elderly People with a Pre-Existing Condition
American Indian/Alaska Native	46,000	10,200	22.1%	0.7%
Asian	409,600 1,284,400	40,600 287,900	9.9% 22.4%	2.8% 19.7%
Black, non-Hispanic				
Hawaiian/Pacific Islander	* * *	* * *	* * *	* * *
Hispanic	483,500	73,000	15.1%	5.0%
White, non-Hispanic	4,354,600	1,048,200	24.1%	71.8%
Total**	6,587,000	1,461,000	22.2%	100.0%

Table 4. Virginians under Age 65 Diagnosed with a Pre-Existing Condition that Could Result in a Denial Of Coverage, by Race or Hispanic Origin

\* Data are for the non-institutionalized, non-Medicare-eligible population.

\*\* Numbers do not add to total because of rounding.

\*\*\* Due to small sample size, data on Hawaiians/Pacific Islanders are not reportable.

Our analysis is based on the number of Virginians who are *diagnosed* with a pre-existing condition that could lead to a denial of coverage. The analysis did not control for disparities in access to care and in the delivery of care that may result in lower rates of diagnosed disease among certain racial and ethnic minority groups. For a more in-depth examination of this point, please see the Discussion on page 6 of the national report, available online at www.familiesusa.org.
