

Cutting Medicaid in Arkansas: Harming Seniors and People with Disabilities Who Need Long-Term Care

Some policy makers at the state and federal levels, seeking to close budget gaps, are looking to cut Medicaid, the state and federally funded program that provides health coverage to many low-income people. At the federal level, there is talk of making significant cuts to Medicaid, as well as of changing Medicaid into a block grant or capped program, with significantly reduced funding, which would also result in cuts to eligibility and to services that are covered by Medicaid. States are considering direct cuts to Medicaid services. They are also requesting relief from the Medicaid maintenance of effort (MOE) requirement in the health care law, the Affordable Care Act. This requirement is an important protection that prohibits states from reducing their Medicaid eligibility levels or changing the rules to make it harder for people to enroll in Medicaid.

While the current budget climate demands that states make smart fiscal decisions, arbitrarily cutting Medicaid would be a bad decision for Arkansas. It would be a bad decision for the nearly 203,000 Arkansas seniors and people with disabilities who rely on Medicaid, and it would be a bad decision for their families.¹ That's because Medicaid is the major payer of long-term care, both nationally and in Arkansas.² Cutting Medicaid would affect the availability of long-term care for all Arkansans.

Medicaid is critical for Arkansas seniors and people with disabilities who need long-term care.

Few people have insurance that covers long-term care: Medicare doesn't cover long-term care, and neither does job-based health insurance. Long-term care costs can be financially devastating. In Arkansas, nursing home costs average \$48,900 a year, and 67.7 percent of Arkansas's nursing home residents rely on Medicaid to pay for their nursing home care. Home health aides cost, on average, \$16 an hour.³ Many people who need long-term care exhaust their savings to the point that they become eligible for Medicaid. For 68,600 seniors and 134,300 people with disabilities in Arkansas, Medicaid is a critical source of coverage for long-term care, often the only avenue they have to get the care they need.⁴

Medicaid helps Arkansas seniors and people with disabilities stay in their homes and communities longer.

Medicaid doesn't just pay for long-term care in nursing facilities. In Arkansas, about 33.7 percent of Medicaid spending on long-term care covers care that is provided to people in their homes or in the community.⁵ Medicaid's home- and community-based care helps nearly 33,000 Arkansans stay out of nursing homes.⁶

Keeping people in the community longer saves Arkansas money.

When states cut Medicaid long-term care spending, they often target home- and community-based services. For example, they might cut the number of hours of home care that people in Medicaid can receive or reduce or eliminate support services like transportation. That's because states are required to provide nursing facility care in their Medicaid programs, but providing most non-institutional care is optional. However, cutting home- and community-based services is short-sighted. Those services are less costly per person and can reduce people's need for more expensive nursing home care.^{7,8} Cutting home- and community-based long-term care would mean that more Arkansans will have to turn to institutional care—care that will ultimately be paid for by Medicaid. That's a bad choice for Arkansas seniors and people with disabilities and a choice that would cost Arkansas more in the long run.

Medicaid enables Arkansas to build a long-term care workforce that can meet the needs of all its residents.

More than 28,000 direct care workers provide care to Arkansans who need long-term services (both those with Medicaid and those with other coverage).⁹ These workers include home health aides, nursing aides, orderlies, and personal care attendants. To meet the demands of its aging population, by 2016, Arkansas will need to expand its workforce by 25.9 percent.¹⁰ Because Medicaid is a critical source of payment for Arkansas's long-term care workers, cuts to Medicaid could mean cuts in payments to providers, including long-term care workers. That could result in salary reductions or reductions in the number of workers, which could, in turn, affect the quality of care and the availability of workers for all Arkansans who need long-term care. A strong Medicaid program with adequate payment for care providers is essential to helping Arkansas build a workforce that can meet the long-term care needs of all its residents, whether they have Medicaid or not.

Medicaid helps Arkansans who have a spouse, a parent, a child, or another loved one who needs long-term care.

About 550,000 Arkansans are informal caregivers.¹¹ These are spouses, children, parents, siblings, and others who are caring for a relative or loved one. Many of them are caring for someone with Medicaid. For those caregivers, the services that Medicaid provides allow them to maintain their jobs, take care of their families, or simply rest when they need to.

The burdens of caregiving have an economic impact on caregivers. About one-third of family caregivers reduce their work hours, one-third cut back on household spending, and one-quarter postpone personal medical care because of caregiving responsibilities. Reductions in spending, work hours, and delayed health care not only hurt families, but they can also have negative consequences for Arkansas's economy. By helping caregivers, Medicaid helps Arkansas families and Arkansas's economy.

By helping Arkansas families, Medicaid helps Arkansas businesses.

Family caregiving responsibilities also affect Arkansas businesses. Nationally, businesses lose an estimated \$33 billion annually due to absenteeism, reduced work hours, and hiring replacement costs associated with employee caregiving responsibilities.¹² By helping caregivers and by giving them the support they need so that they can remain in the workforce, Medicaid helps Arkansas businesses.

Arkansans want a strong Medicaid program—particularly for home- and community-based services.

Polls show strong public support for the Medicaid program and opposition to program cuts.¹³ Support for the long-term services that Medicaid pays for, particularly home- and community-based services, is also very high.¹⁴ Seniors and people with disabilities who need long-term services would far prefer living in the community to living in an institution, and the home- and community-based programs in Arkansas Medicaid make that preference a reality for tens of thousands of Arkansans.

The Bottom Line

For nearly 203,000 low-income seniors and people with disabilities in Arkansas, Medicaid is critical. The long-term services coverage that Medicaid provides is the only avenue they have for getting the long-term care they need. For nearly 33,000 of these Arkansans, Medicaid makes the difference between living in the community and living in an institution. But Arkansas's Medicaid program helps families in other important ways too: It helps the family members and friends who care for people in Medicaid who need long-term care, giving them much needed assistance with costs and helping them more fully participate in the economy. By helping those caregivers, Medicaid helps Arkansas businesses. Medicaid is also an important source of support for jobs for Arkansas's long-term care workers. Cutting Medicaid services would be bad for Arkansas seniors and people with disabilities and their families.
